

## PSU GUIDE Q2/2024

[www.chieftec.eu](http://www.chieftec.eu)

**PSU** stands for **POWER SUPPLY UNIT** and plays a decisive and vital role in every PC configuration since it is „the heart“ of your PC.

The installed components of your PC have different levels of power (electricity) consumption, voltages, efficiencies and connectors which are managed & serviced by the **POWER SUPPLY UNIT**.

Therefore, it is important to choose the right **POWER SUPPLY UNIT** for your PC, based on the intended applications to be run.

Applications could include: Gaming, mining, workstation/servers, office PCs, home PCs, POS systems, etc...

**POWER SUPPLY UNITS** come in different formats, pending on the chassis format they are to be installed into. Most popular ones include:

- **ATX →**  
Size: 140 mm (160mm) x 150 mm x 86 mm  
Wattages: 350W – 1450W
- **SFX →**  
Size: 125 mm x 100 mm x 64 mm  
Wattages: 250W – 650W
- **TFX →**  
Size: 175 mm x 85mm x 64 mm  
Wattages: 250W – 400W
- **External Power Adapter**  
Wattages: 85W & 120W

### EFFICIENCY DEFINITION:

Products are defined as “EFFICIENT”, if they have 80% or more energy efficiency at 20%, 50% and 100% load and a power factor of at least 0.9 at 100% load.

### ADVANTAGE:

Pending on the efficiency level of the product, 20% or less electric energy is dissipated/lost in form of heat at specified load levels thereby reducing electricity use/consumption and resulting in much cheaper/lower bills, not to oversee the environmental advantages.

### EFFICIENCY LEVELS:

Percentage of rated load	10%	20%	50%	100%
80 Plus		80%	80%	80%
80 Plus Bronze		82%	85%	82%
80 Plus Silver		85%	88%	85%
80 Plus Gold		87%	90%	87%
80 Plus Platinum		90%	92%	89%
80 Plus Titanium	90%	92%	94%	90%

## ATX 3.0 DEFINITION:

ATX 3.0 is a new power standard announced by Intel in 2022. The new standard upgrades the 12VHPWR power supply interface of the graphics card, using 12+4 pins, and the maximum power supply can reach 600W, which is mainly used to meet the power supply requirements of PCIe 5.0 graphics cards.

Increase the peak power supply in the blink of an eye, 10% duty cycle, 100 microseconds, and undertake 200% index efficiency.

Duty Cycle	Time for Power Excursion (T <sub>E</sub> )	Time Constant (T <sub>C</sub> )	Power @ T <sub>E</sub>	Power @ T <sub>C</sub>
10%	100 μs	900 μs	2000 W	817 W
20%	1 ms	4 ms	1800 W	663 W
25%	10 ms	30 ms	1600 W	693 W

## PCIe GEN 5.0 12VHPWR DEFINITION:

INTEL calls the 4 pins of 12VHPWR SIDEBAND SIGNALS, power supply manufacturers can set 150W / 300W / 450W / 600W four power levels to control and tell the graphics card the highest (auxiliary) power it can get from it .

Pending on the efficiency level of the product, 20% or less electric energy is dissipated/lost in form of heat at specified load levels thereby reducing electricity use/consumption and resulting in much cheaper/lower bills, not to oversee the environmental advantages.

- All 12 Power Contacts Rated up to 9.2A
- Completely separate terminals

**24PIN** → Main power connector for motherboards (20 + 4 PINs ATX)

**4PIN 12V** → CPU power connector (P4 power connector) ATX 12V power connectors on motherboards. For most computers, you will just need to connect a single 4 pin connector.

**8PIN EPS (4+4) 12V** → A hybrid of the 4 PIN ATX12V and EPS 12V connectors that can be split in half or combined to accommodate either the EPS 12V Socket or the ATX 12V socket. Provides additional power to the CPU.

**6PIN PCIe** → PCI Express power cable used to power GPUs/graphic cards with higher power demand.

**8PIN PCIe (6+2)** → PCI Express power cable used to power premium GPUs/graphic cards with high power demand.

**16PIN PCIe GEN 5** → 12VHPWR Cable Plug Connector used to power premium GPUs/graphic cards with high power demand

**Molex** → power connector for IDE HDDs & ODDs. Although old standard, MOLEX can be hijacked with adapters to provide SATA, 8PIN PCIe or 8PIN EPS 12V additional connectors.

**SATA** → Serial-ATA power cable connectors for SATA HDDs/SSDs and ODDs

**Floppy** → FFD for floppy drives. Basically not required anymore.

**NOTE:**

the amount and types of connectors on a PSU determine the amount and type of mainboards, add-on cards and peripherals that can be installed and what technology is compatible.

## SMART (RETAIL) series

**Models: GPS-400A8, GPS-500A8, GPS-550A8, GPS-600A8, GPS-650A8 & GPS-700A8**

### Unique Selling Points:

- HIGH VALUE HOME/GAMING & OFFICE SYSTEMS
- 85% EFFICIENCY @230V (equivalent to 80PLUS BRONZE)
- DIRECT CABLES
- RETAIL (incl. Pwr cord + accessories) & BULK (excl. Pwr cord & accessories)
- Double forward design with +3.3V magnetic amplification
- +12V Single Rail Technology
- 12cm ball bearing (silent) fan
- Security features: UVP, OVP, SCP, OPP, AFC & SIP

## SOLID (BULK/OEM) series

Models: **GPP-400S, GPP-500S, GPP-600S & GPP-700S**

### Unique Selling Points:

- MAIN STREAM HOME & OFFICE
- 85% EFF @230V (equivalent to 80PLUS BRONZE)
- BULK (excl. Pwr cord & accessories)
- +12V Single Rail Technology
- XTRA long CPU and MB cables (650mm)
- 400W – 700W with 8PIN EPS (4+4)
- Security features: UVP, OVP, SCP, OPP, AFC & SIP
- Active PFC (PF 0,9)
- Thermal board

Models: SFX-500GD-C

### Unique Selling Points:

- GAMING/HIGH PERFORMANCE
- 80PLUS GOLD (SFX-500DG-C)
- RETAIL (incl. Pwr cord & accessories)
- +12V Single Rail Technology
- 8cm ball bearing (silent) fan
- Security features: UVP, OVP, SCP, OPP, OCP, OTP, AFC & SIP
- Thermal board
- Dedicated to SFF (small form factor) cases
- ATX 2.3 version

# QUALITY CONTROL

1 New Chroma 8000 \* 2,  
have joined us this year

This powerful feature saves time and reduces significantly, human operations errors which in turn decreases failure rate due to improper tests.

## QUALITY CONTROL

Brand new soldering machine launched in 2014 to ensure clean soldering processes which increase longevity of components and related solutions

The new BURN-IN room which is used to stress-test PSUs until burning point to establish max. values correctly.

# QUALITY CONTROL

4  
Phased in solder paste process for daughter PCB board

Brand new soldering paste processes for daughter mainboards to enhance cleaner and more dependent soldering points.

The glue is a relevant aspect of the PSU so that anti water, dust and insulation glue is now implemented to enhance functionality further.

5  
Anti-Water, dust and Insulation glue on feedback resistance

# QUALITY CONTROL

Vibration test machine setting in end of production line

The vibration test is run on every single unit at the end of the production line to further ensure all quality standards are met.

SMD capacitors have been replaced with TDKs to boost longevity and ensure additional MTBF.

Replace SMD capacitors with TDK for all models

## QUALITY CONTROL

Both soldering spray and solder bars have been upgraded to very renowned brand ALPHA which ensures highest quality soldering.

Solder bars with 0,3% silver to ensure long-term soldering results and lowest possible insulation.
