1 Quick Start

Pharos Control is the management software for TP-Link Pharos devices. With this software, you can centrally manage all Pharos devices using a web browser. Follow the steps below to complete the basic set up.

1. *Determine the Network Topology*
2. *Install Pharos Control*
3. *Log in to Pharos Control*
4. *Add the Devices to be Managed*
5. *Monitor and Manage the Network*

1.1 Determine the Network Topology

You can use Pharos Control to centrally manage the devices in the same or different network segment.

1.1.1 Manage Devices in the Same Network Segment

To manage devices in the same network segment, refer to the following topology.

In the LAN, one host must have Pharos Control installed, and this host is called the Control Host. Other hosts in the same subnet can access the Control Host via a web browser to manage the devices. In the following topology, you can visit Pharos Control interface from Client A by entering "http://192.168.1.2: 9321" in a web browser.

Tips:

- Ensure the network reachability between Client and Control Host.
- It's recommended to assign the Control Host with a static IP address to allow more convenient login to Pharos Control interface.
- To manage the Pharos devices remotely via Internet, you need to open the service port on the router. For example, here the service port number is 9321.

Note:

Pharos Control server must be running at all the times while you manage the network.

1.1.2 Manage Devices in Different Network Segment

If the Control Host needs to manage devices in different network segments, refer to the following topology.

The Control Host and the devices are connected to different network segments of the router. Ensure the Pharos devices are able to reach the Control Host, and the Control Host will be able to

manage the devices centrally. Similarly, other hosts on the network can access the Control Host via a web browser to manage the devices.

Note:

- The router should work in non-NAT mode.
- For all the Pharos devices, make sure that firewall doesn't block port 20002 and port 22. Port 20002 is used for discovery and port 22 is used for management by Pharos Control server.

1.2 Install Pharos Control

Make sure the computer being used as the Control Host meets the system requirements and then follow the instructions below to install the Pharos Control software.

1.2.1 System Requirements

Operating System: Microsoft Windows Vista/7/8, Linux.

Web Browser: Mozilla Firefox 32 (or above), Google Chrome 37 (or above), Opera 24 (or above), or Microsoft Internet Explorer 8 (or above).

Note:

We recommend that you deploy Pharos Control on a 64-bit operating system to guarantee software stability.

1.2.2 Install Pharos Control Software

The installation procedures for Windows and Linux systems are different. Determine your operation system and follow the introduction below to install Pharos Control.

Installation on Windows System

Follow the steps below to install the Pharos Control software on your Windows system.

1. Go to <http://www.tp-link.com/en/download/Pharos-Control.html>, and download the Pharos Control software for Windows.
2. Double-click the icon  to execute the installation file. Please wait while the InstallShield Wizard is being prepared, as shown in the screen below.

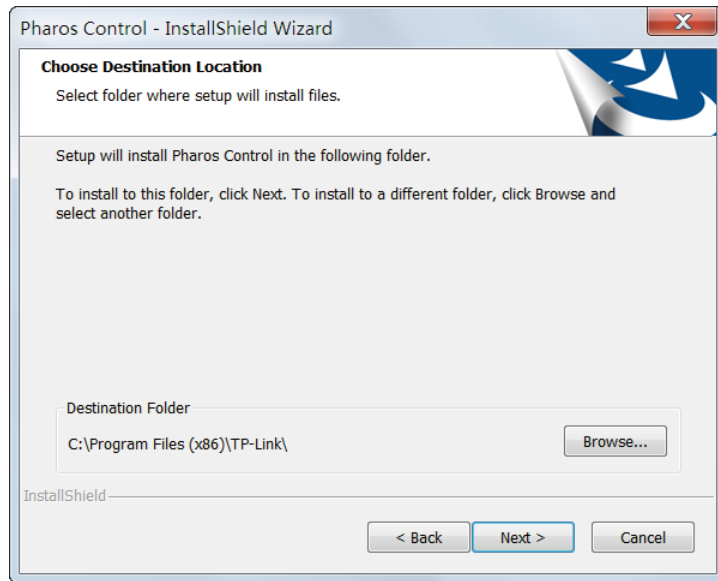

3. The following dialog box will pop up. Ensure that all the antivirus softwares are closed and click **OK** to continue.

4. Click **Next** to continue.

5. Choose the destination location for the installation files and click **Next** to continue.

6. The following screen shows the default settings of Pharos Control. You can customize the Server Port number, Username and Password. Click **Next** to continue.

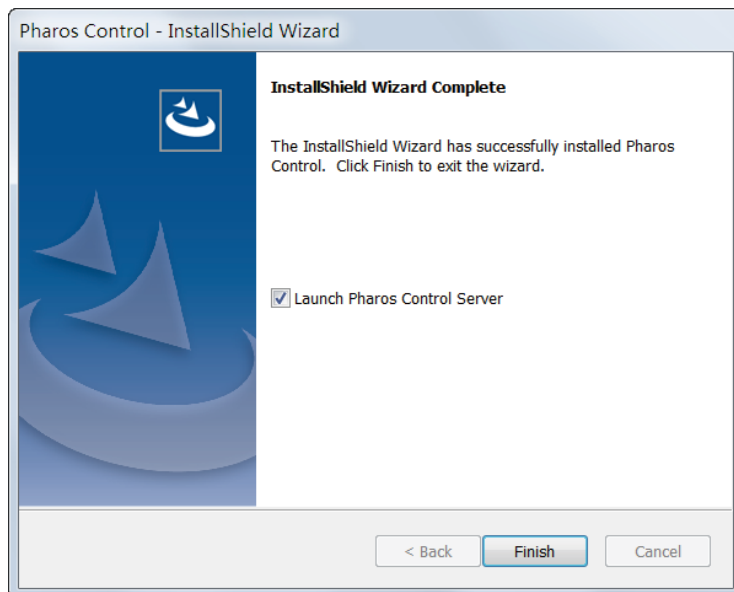

Tips:

- The Control Host can be accessed remotely using another host (Client Host). The Client Host can use the IP address of the Control Host and the server port number configured here to access it. For example, if the IP address of the Control Host is 192.168.0.10, and the server port is 9321, the you can enter "http://192.168.0.10:9321" in a web browser to access the Control Host from the Client Host and monitor or manage the devices.
- The username and password set here will be used to log in to the Pharos Control software. Please make a note of them.

7. Click **Next**.

8. Wait for a moment and the following window will appear. Click **Finish** to complete the installation and launch Pharos Control. Additionally, a shortcut icon  for Pharos Control server will be created on your desktop.

Installation on Linux System

Pharos Control is a Java application, which requires Java Runtime Environment (JRE). Make sure that your Linux system has been installed with JRE 1.7 (or above).

1. Go to <http://www.tp-link.com/en/download/Pharos-Control.html> and download the software package for Linux. Decompress the package and you can find three software files: one for Deb system and two for RPM system (32-bit and 64-bit). Determine your Linux system type and choose the proper software file.

2. Go to the download path of the software and enter the command line.

For Deb: `sudo dpkg -i PharosControl-2.0.0-1.ub16.deb`

For 32-bit RPM: `sudo rpm -ih PharosControl-2.0.0-1.fc25.i686.rpm`

For 64-bit RPM: `sudo rpm -ih PharosControl-2.0.0-1.fc25.x86_64.rpm`

3. Enter your system password.

1.3 Log in to Pharos Control

Launch the software and follow the instructions to complete the basic configuration and then log in to the management interface.

1.3.1 Launch Pharos Control Server

Launch on Windows System

For Windows system, double-click the software icon to launch Pharos Control server. Then the following window will pop up. You can minimize the window but do not close it.

The upper half of the window displays the running status of Pharos Control. The lower half contains corresponding operation buttons. For details, refer to the following table:

Server Status	Displays the status of Pharos Control. Running: Pharos Control is running normally and you can use it to manage devices. Stopped: Pharos Control is stopped.
Server Port	Displays the current server port of Pharos Control.
Open Web Page	Click this button to open the management interface with a web browser.
Session Information	Displays the information of the Client Hosts connecting to Pharos Control, including Username, Role and Client Address. You can right-click a client and choose to disconnect it.
Restart Server	Click this button to restart Pharos Control.
Stop Server	Click this button to stop Pharos Control.
Start Server	Click this button to start Pharos Control.
Back up Database	Click this button to back up the current database and save it as a backup file on your local computer. If needed, you can restore the database with this backup file.
Restore Database	Click this button to restore the database with a previous backup file.
Reset Database	Click this button to reset the database.
View Logs	Click this button and you will be directed to a file folder. Open the txt file in this folder and you can view the server logs.
Settings	Click this button and the following window will pop up. You can change the port setting and select whether Pharos Control will run automatically upon booting up. 
Exit	Click this button to exit Pharos Control. Note: Do not exit Pharos Control while managing and monitoring devices.

Launch on Linux System

For Linux system, use the command `sudo /etc/init.d/pharoscontrol start` to launch Pharos Control server. You can also use the following commands to execute other operations:

<code>sudo /etc/init.d/pharoscontrol shutdown</code>	Exit Pharos Control server.
<code>sudo /etc/init.d/pharoscontrol stop</code>	Force a shutdown of Pharos Control server.

<code>sudo /etc/init.d/pharoscontrol status</code>	View the current status and server port of Pharos Control server.
<code>sudo /etc/init.d/pharoscontrol list</code>	View the information of the client hosts connecting to Pharos Control, including username, role, client address and session number.
<code>sudo /etc/init.d/pharoscontrol kick [session]</code>	Disconnect the specific Client Host using its session number.
<code>sudo /etc/init.d/pharoscontrol reset</code>	Reset the database.
<code>sudo /etc/init.d/pharoscontrol backup [file directory]</code>	Back up the current database and save it as a backup file on your local computer. If needed, you can restore the database with this backup file.
<code>sudo /etc/init.d/pharoscontrol restore [file directory]</code>	Restore the database with a previous backup file.

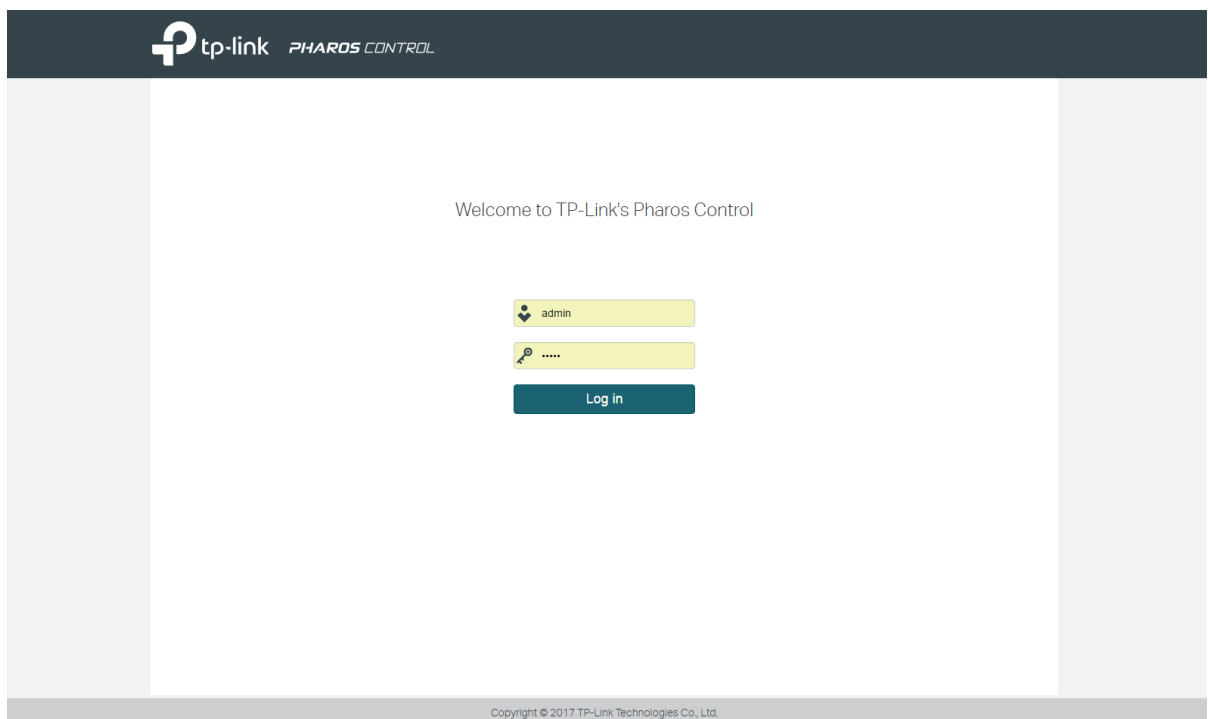

Tips:

To change the server port number of Pharos Control, you can open the file `/opt/pharoscontrol/conf/setting/me.properties`, find the field "port=9321", and change "9321" to your desired port number.

1.3.2 Log in to the Management Interface

For Windows system, click **Open Web Page** on the server interface and the web browser will open automatically. For Linux system, open the web browser and enter "http://127.0.0.1:9321".

On the login interface, enter the username and password you have set in the installation process, and click **Log in**.

Tips:

Other hosts which are able to reach the Control Host can also manage the devices via remote access. For example, when the IP address of the Control Host is 192.168.0.100 and the server port number is 9321, you can enter <http://192.168.0.100:9321/login> or <http://192.168.0.100:9321> in the web browser of other hosts to log in to the management interface and manage the devices.

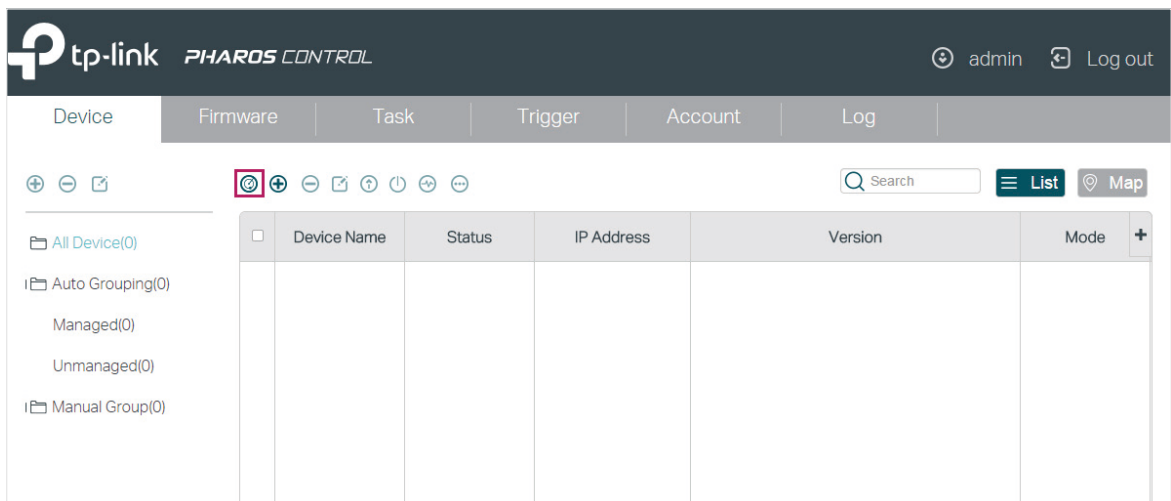

1.4 Add the Devices to be Managed

Before managing the devices, you need to add them to Pharos Control. There are two methods: discovering the devices automatically and adding them manually.

1.4.1 Discover the Devices Automatically

Pharos Control can discover all Pharos devices currently connected to the network. Follow the steps below to discover and add the devices to Pharos Control:

1. Go to the **Device** page, and click .

2. In the pop-up window, select your desired scanning method, and click **OK**. There are two methods provided: **Auto** and **Custom IP-Range Scan**. With **Auto** selected, Pharos Control will scan the devices in the same subnet. With **Custom IP-Range Scan** selected, you can specify the IP range of the devices, and Pharos Control will scan the devices in the IP range. **Custom IP-Range Scan** should be selected if you want to scan the devices in a different subnet.

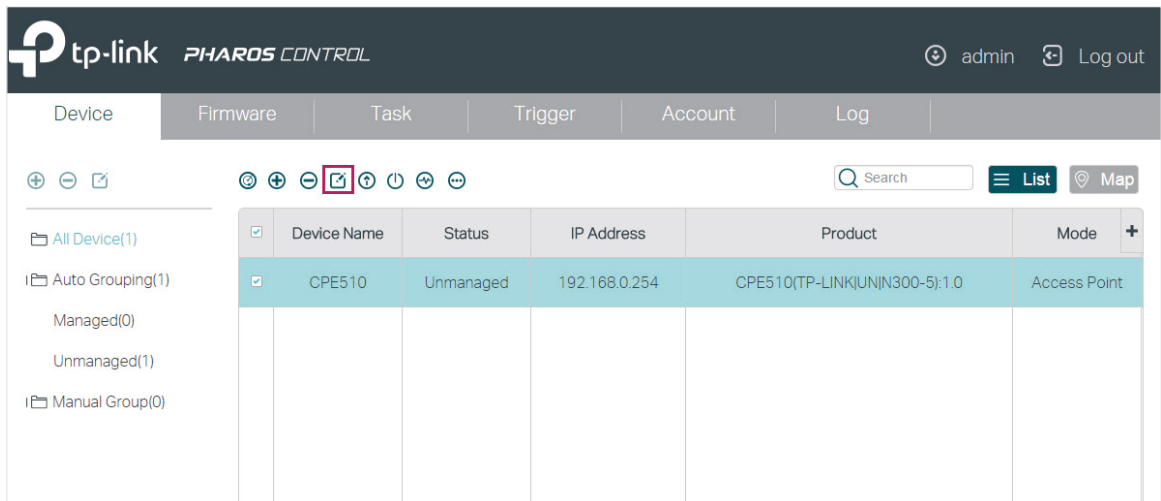

The screenshot shows a 'Discover' dialog box. It has a title bar 'Discover'. Below the title bar, there are two radio button options: 'Auto (Scan devices in the same subnet as the server)' which is selected, and 'Custom IP-Range Scan' with an empty input field. Below the options, there is an example IP range '192.168.0.0/24' and a note 'The netmask must be at least 24 digits long.' At the bottom, there are 'Cancel' and 'OK' buttons.

3. Pharos Control will start scanning the devices. After the discovery is completed, close the window.

4. Select one or more devices to be managed, and click  .

5. The following window will pop up. Specify a description for the device if you like. Check the box of **Set Managing Option**, and enter the username, password and port number of the device. The username and password are both admin by default; if you have changed them, enter the new ones. The port here means the SSH server port which is configured on the device, and you can find this value on the **Management** page of the device. Click **Start Managing**.

Note:

If you want to do this operation for multiple devices at the same time, make sure that the username, password and port number of these devices are the same.

Edit

IP Address:

Description:

Set Managing Option

Username:

Password:

Port:

6. If the input device information is correct, the status will change from Unmanaged to Managed, and you can manage the device via Pharos Control.

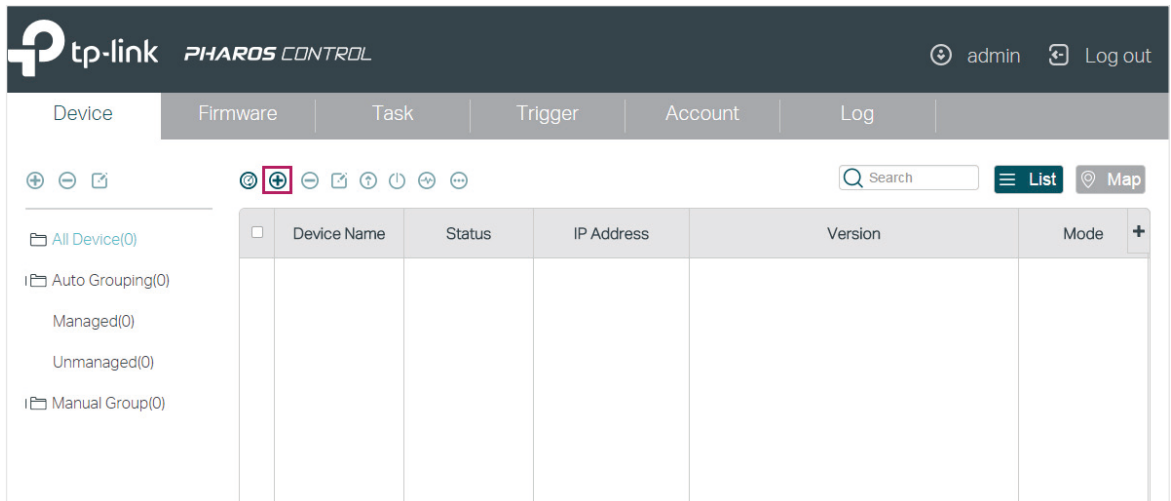

The screenshot shows the TP-Link PHAROS CONTROL interface. The top navigation bar includes the TP-Link logo, the product name 'PHAROS CONTROL', and user information 'admin' with a 'Log out' button. Below the navigation bar is a tabbed interface with 'Device' selected. The main area contains a search bar, 'List' and 'Map' buttons, and a table of devices. The table has columns for Device Name, Status, IP Address, Product, and Mode. One device is listed: CPE510, with a status of 'Managed' and IP address 192.168.0.254. The product is identified as CPE510(TP-LINK|UN|N300-5):1.0, and the mode is 'Access Point'. A left sidebar shows a tree view of device groups: 'All Device(1)', 'Auto Grouping(1)', 'Managed(1)', 'Unmanaged(0)', and 'Manual Group(0)'.

Device Name	Status	IP Address	Product	Mode
CPE510	Managed	192.168.0.254	CPE510(TP-LINK UN N300-5):1.0	Access Point

1.4.2 Add the Devices Manually

Follow the steps below to add the devices manually.

1. Go to the **Device** page, and click .

2. In the pop-up window, specify the IP address of the device and give a description for identification. Check the box of **Set Managing Option**, and enter the username, password and port number of the device. The username and passport are both admin by default; if you have changed them, enter the new ones. The port here means the SSH server port which is configured on the device, and you can find this value on the **Management** page of the device. Then click **OK**.

The screenshot shows a pop-up window titled 'Add'. It contains the following fields and options:

- IP Address:** 192.168.0.220
- Description:** Device 1
- Set Managing Option**
- Username:** admin
- Password:**
- Port:** 22

At the bottom right of the window, there are two buttons: 'Cancel' and 'OK'.

3. Select the device and click  .

The screenshot shows the TP-Link PHAROS CONTROL interface. At the top, there is a navigation bar with the TP-Link logo and 'PHAROS CONTROL' text. On the right, there are user controls for 'admin' and 'Log out'. Below the navigation bar, there are tabs for 'Device', 'Firmware', 'Task', 'Trigger', 'Account', and 'Log'. The 'Device' tab is active. On the left side, there is a sidebar with a tree view showing device groups: 'All Device(1)', 'Auto Grouping(1)', 'Managed(0)', 'Unmanaged(1)', and 'Manual Group(0)'. The main area displays a table of devices. The table has columns for 'Device Name', 'Status', 'IP Address', 'Product', and 'Mode'. The first row is highlighted in light blue and contains the following data: 'New Device', 'Unmanaged', '192.168.0.220', and 'Access Point'. Above the table, there is a toolbar with various icons, including a search box, a 'List' button, and a 'Map' button. The edit icon (a square with a pencil) in the toolbar is highlighted with a red box.

Device Name	Status	IP Address	Product	Mode
New Device	Unmanaged	192.168.0.220		Access Point

4. Then the following window will pop up. Click **Start Managing**.

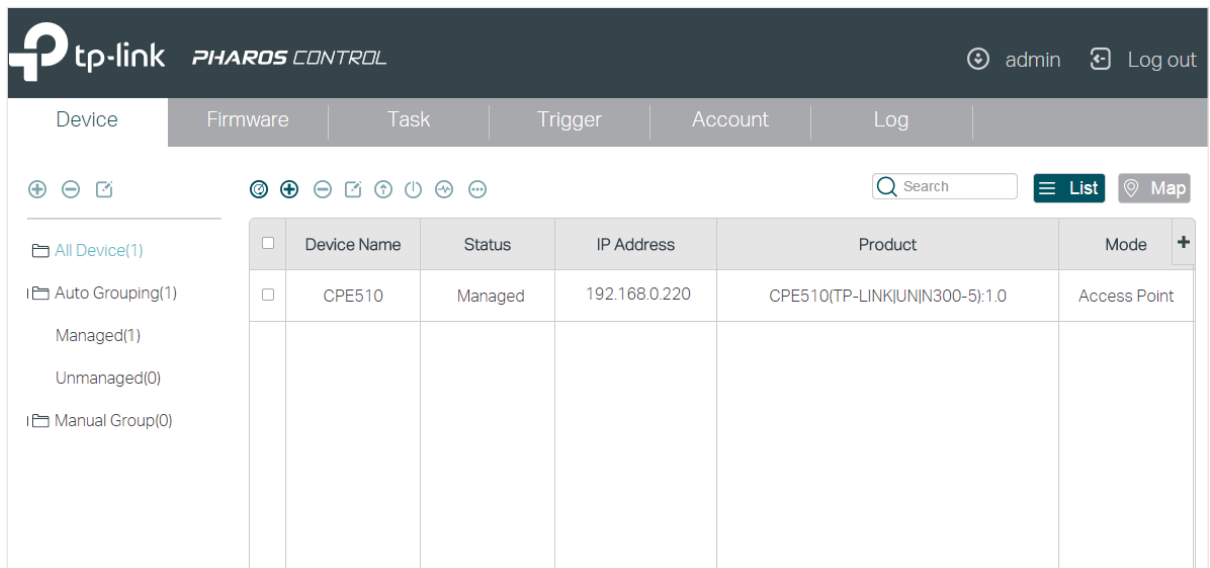

The screenshot shows an 'Edit' dialog box. It has a title bar that says 'Edit'. Below the title bar, there are several input fields and a checkbox. The fields are: 'IP Address:' with the value '192.168.0.220', 'Description:' with the value 'Device 1', 'Username:' with the value 'admin', 'Password:', and 'Port:' with the value '22'. There is a checkbox labeled 'Set Managing Option' which is currently unchecked. At the bottom of the dialog, there are three buttons: 'Cancel', 'Save', and 'Start Managing'.

- If the input device information is correct, the status will change from Unmanaged to Managed, and you can manage the device via Pharos Control.

1.5 Monitor and Manage the Network

When all the configurations above are finished, you can centrally monitor and manage the devices on Pharos Control's management interface.

Pharos Control has the following management tabs, providing a wide range of management functions.

Device	You can discover, add and group the devices. For the managed devices, you can monitor their information and running status, upgrade and reboot them in batch, and so on.
Firmware	You can import the firmware files for the Pharos devices and centrally manage these files.

Task	You can set scheduled rules for the specified devices on the specified time. For example, you can configure the devices to reboot every two weeks, or configure Pharos Control to discover the devices in the LAN at 8:00 am every day.
Trigger	You can configure Pharos Control to notify you of the device status change via email. For example, if a device in Managed status breaks down and changes to Unmanaged status, Pharos Control will send an email to inform the network administrator of this event.
Account	You can manage your account information, including username, password, email and so on. As the original administrator, you can also create multiple accounts with different privileges and distribute these accounts to other administrators.
Log	You can view and manage the system logs.

2 Monitor and Manage the Network

With Pharos Control you can centrally monitor and manage your Pharos devices. This chapter includes the following sections:

- *Monitor and Manage the Devices*
- *Manage the Firmware Files*
- *Configure Scheduled Tasks*
- *Configure Trigger Rules*

2.1 Monitor and Manage the Devices

This chapter introduces how to monitor and manage the devices. First, you need to add the devices to be managed in Pharos Control. For detailed instructions, refer to [Add the Devices to be Managed](#) in Chapter 1. You can also group these devices according to your need. And then you can monitor the devices, and centrally manage them, such as reboot, upgrade and ping the devices. In addition, Pharos Control provides the map feature. With this feature, you can visually manage the devices on the map.

The following sections introduce how to group, monitor and manage the devices, and how to use the map feature to facilitate your management.

2.1.1 Group the Devices

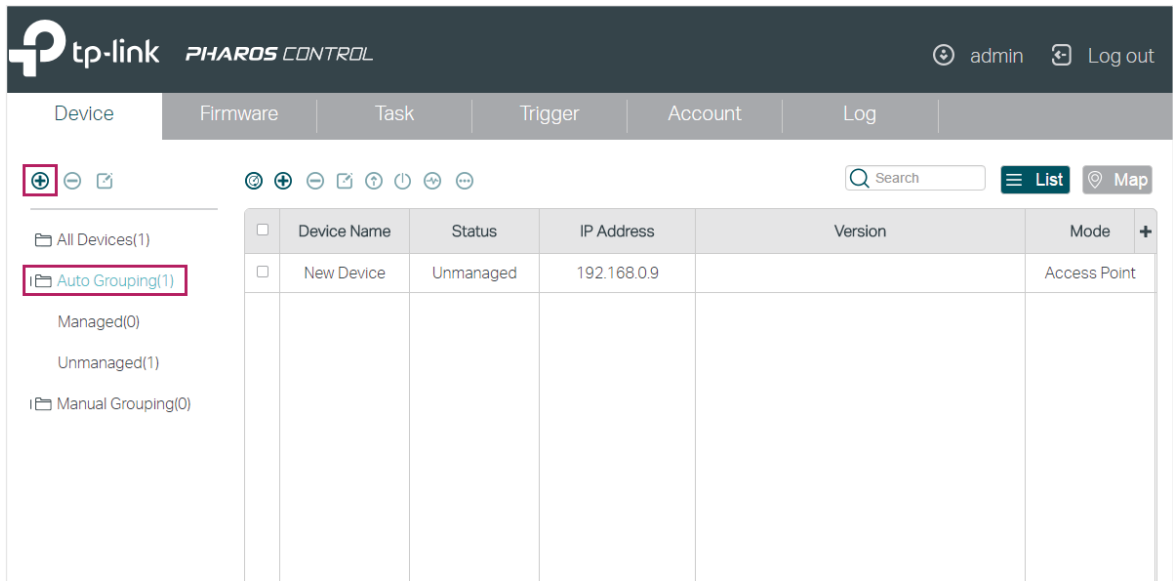

When there are a number of devices in the network, it is recommended to group these devices for efficient management and fast search. Pharos Control provides two kinds of groups: Auto group and Manual group. And in Auto group, there are two default groups: Managed and Unmanaged. The managed devices are in the Managed group, and the unmanaged devices are in the Unmanaged group. You can manually create more groups as needed. There are two methods:

- Auto Grouping: You can set the rules to automatically group the devices. For example, you can create an Auto group and set a rule that all the devices with a same SSID will be added to this group automatically.
- Manual Grouping: You need to manually add the devices to the corresponding group.

Auto Grouping

Follow the steps below to create a new group and set a rule to automatically add the devices to this group:

1. Go to the **Device** page. Click **Auto Grouping** and click  .

2. In the pop-up window, specify a name for the new group and set one or more rules for this group. Click **OK**, and the devices matching the rules above will be added to the group automatically.

Add Group

Name:

Expression

>  

>  

For example, here we add two rules: "the client number is larger than 15" and the "CPU load is larger than 70%". Then we choose "OR" as the logical relation between the two rules, which means that a device will be automatically added to this group when meeting either one of the rules. Also you can select "AND" which means that a device will be automatically added to this group when it meets both the rules. You can click  to add more rules and click  to delete the rule.

There are six types of matching rules:

contains	It is used to compare the strings, such as device name, product, IP address and version. When the real string contains the specified consecutive string, the match of this rule is successful.
startswith	It is used to compare the strings, such as device name, product, IP address and version. When the real string starts with the specified consecutive string, the match of this rule is successful.
=	It is used to compare both the strings and numbers. When the real string or number is completely the same as the specified one, the match of this rule is successful.
!=	It is used to compare both the strings and numbers. When the real string or number is not the same as the specified one, the match of this rule is successful.
>	It is used to compare the numbers, such as SNR, Tx rate, CPU load and Memory usage. When the real number is larger than the specified one, the match of this rule is successful.
<	It is used to compare the numbers, such as SNR, Tx rate, CPU load and Memory usage. When the real number is smaller than the specified one, the match of this rule is successful.

Manual Grouping

Follow the steps below to create a new group and add the specific devices to this group:

1. Go to the **Device** page. Click **Manual Grouping** and click  .

The screenshot shows the TP-Link PHAROS CONTROL interface. The top navigation bar includes the TP-Link logo, the text "PHAROS CONTROL", and user information "admin" and "Log out". Below the navigation bar, there are tabs for "Device", "Firmware", "Task", "Trigger", "Account", and "Log". The "Device" tab is active. In the left sidebar, there is a list of device groups: "All Devices(2)", "Auto Grouping(2)", "Managed(2)", "Unmanaged(0)", and "Manual Grouping(0)". The "Manual Grouping(0)" item is highlighted with a red box. The main content area shows a table with columns: "Device Name", "Status", "IP Address", "Version", and "Mode". The table is currently empty. There are various icons for actions like add, edit, and delete, and a search bar with the text "Search".

2. In the pop-up window, specify a name for the new group and click **OK**.

The 'Add Group' dialog box contains a text input field with the name 'CPE510' and two buttons: 'Cancel' and 'OK'.

3. Select your desired devices to be added to the new group. Click , move your mouse to **Add to Group** and select the new group.

The screenshot shows the TP-Link Pharos Control interface. A table lists devices with columns for Device Name, Status, IP Address, Version, and Mode. The device 'CPE510' is selected. A context menu is open over the 'CPE510' row, with the 'Add to Group' option highlighted. The 'CPE510' group is also visible in the left-hand navigation pane.

Device Name	Status	IP Address	Version	Mode
CPE210	Managed	192.168.0.21	2.0.0 Build 20161117 Rel. 38185	Access Point
CPE510	Managed	192.168.0.220	2.0.0 Build 20161025 Rel. 41794	Access Point

4. Then the selected devices will be added to the new group. You can enter the group to check the configuration result.

The screenshot shows the TP-Link Pharos Control interface. The 'CPE510(1)' group is selected in the left-hand navigation pane. The main table shows the configuration for this group, with columns for Device Name, Status, IP Address, Version, and Mode.

Device Name	Status	IP Address	Version	Mode
CPE510	Managed	192.168.0.220	2.0.0 Build 20161025 Rel. 41794	Access Point

2.1.2 Monitor the Devices

With Pharos Control, you can monitor the information and status of the devices. What's more, Pharos Control provides real-time graphic data displaying of the devices. The following sections introduce how to view the information and the real-time graphic data of the devices.

View the Device Information

With Pharos Control, you can view the information of each device. Double click the device and the information will be displayed in the pop-up window. Also, you can view the information directly in the table. Because of the limited space of the page, you may need to drag the slider at the bottom to view all the information options. You can also customize the displayed options by clicking  and enabling your desired options.

The screenshot shows the TP-Link Pharos Control interface. At the top, there is a navigation bar with the TP-Link logo and 'PHAROS CONTROL' text. On the right of the navigation bar, there is a user profile 'admin' and a 'Log out' button. Below the navigation bar, there are tabs for 'Device', 'Firmware', 'Task', 'Trigger', 'Account', and 'Log'. The 'Device' tab is active. On the left side, there is a sidebar with a tree view showing device groups: 'All Devices(2)', 'Auto Grouping(2)' (with sub-items 'Managed(0)' and 'Unmanaged(2)'), and 'Manual Grouping(1)' (with sub-item 'CPE510(1)'). The main area contains a table with columns: 'Device Name', 'Status', 'IP Address', 'Version', and 'Mode'. There is a search bar and 'List' and 'Map' buttons above the table. A dropdown menu is open from the 'Mode' column header, showing a list of information options with checkboxes: Status, MAC Address, IP Address, Product, Version, Mode, SSID, Root AP SSID, Client Number, Transmit CCQ, SNR, and Tx Rate(kbps). At the bottom of the table, it says 'Total number: 2' and 'Selected number: 0'.

Device Name	Status	IP Address	Version	Mode
CPE210	Unmanaged	192.168.0.21	2.0.0 Build 20161117 Rel. 38185	
CPE510	Unmanaged	192.168.0.220	2.0.0 Build 20161025 Rel. 41794	

The following table introduces all the information options:

Device Name	Description
Device Name	Displays the name of the device. For the automatically discovered devices, the device name is the product model. For the manually added devices, the device name is New Device . Only when a device's status is Managed will the device name change to the product model.

Status	<p>Displays the status of the device.</p> <p>Unmanaged: The device cannot be managed by Pharos Control. It is the initial status of the device. Also, when the managed device is down or disconnected to Pharos Control, the status will change from Managed to Unmanaged.</p> <p>Managed: The device is being managed by Pharos Control.</p> <p>Connecting: Pharos Control is trying to connect and manage the device.</p> <p>Upgrading: The device is being upgraded.</p> <p>Rebooting: The device is being rebooted.</p> <p>Connection Failed: Pharos Control is failed to connect the device when trying to manage the device.</p> <p>Invalid Credentials: Pharos Control is failed to manage the device because of incorrect username, password or port number.</p>
MAC Address	Displays the MAC address of the device.
IP Address	Displays the IP address of the device.
Product	Displays the model and hardware version of the device.
Version	Displays the software version of the device.
Mode	Displays the working mode of the device, including Access Point, Client, Repeater, Bridge, AP Router and AP Client Router.
SSID	Displays the SSID of the device.
Root AP SSID	Displays the SSID of the device's root AP when it is in either of the following modes: Client, Repeater, Bridge and AP Client Router.
Client Number	Displays the number of the wireless clients connected to the device.
Transmit CCQ	Displays the transmission quality of the clients connected to the device. Here CCQ refers to Client Connection Quality.
SNR	Displays the Signal-Noise Ratio of the device.
Tx Rate (kbps)	Displays the rate of sending data of the device.
Rx Rate (kbps)	Displays the rate of receiving data of the device.
Tx Total	Displays the total data traffic sent by the device.
Rx Total	Displays the total data traffic received by the device.
CPU Load (%)	Displays the CPU usage of the device.
CPU Frequency (MHz)	Displays the CPU frequency of the device.
Memory Usage (%)	Displays the memory usage of the device.
Memory Size (MB)	Displays the memory size of the device.

Description

Displays the description of the device.

View the Real-time Graphic Data

Pharos Control can collect the real-time data of the managed devices and display it graphically. Follow the steps below to monitor the graphic data information of the device:

1. Select your desired device to be displayed, and click  .

The screenshot shows the TP-Link PHAROS CONTROL interface. The top navigation bar includes the TP-Link logo, the product name 'PHAROS CONTROL', and user information 'admin' with a 'Log out' button. Below the navigation bar are tabs for 'Device', 'Firmware', 'Task', 'Trigger', 'Account', and 'Log'. The 'Device' tab is active, showing a list of devices. On the left, there is a sidebar with folders for 'All Devices(2)', 'Auto Grouping(2)', 'Managed(2)', 'Unmanaged(0)', and 'Manual Group(1)'. The main table lists devices with columns for 'Device Name', 'Status', 'IP Address', 'Version', and 'Mode'. The 'CPE510' device is selected, and the 'Real-time data' icon (a circle with a waveform) is highlighted with a red box.

Device Name	Status	IP Address	Version	Mode
CPE210	Managed	192.168.0.21	2.0.0 Build 20161117 Rel. 38185	Access Point
CPE510	Managed	192.168.0.220	2.0.0 Build 20161025 Rel. 41794	Access Point

2. In the pop-up window, click  to create a graphic template.

The screenshot shows a 'Graph' pop-up window. At the top, there is a close button (X). Below it, there are two radio buttons: 'Option' (selected) and 'Graph'. On the left, there is an 'Attribute Set' section with an 'Add' button (highlighted with a red box) and a 'Delete' button. On the right, there is a list of attributes with checkboxes:

Attribute
<input type="checkbox"/> Tx Rate
<input type="checkbox"/> Rx Rate
<input type="checkbox"/> CPU Load
<input type="checkbox"/> Memory Usage
<input type="checkbox"/> Client Number
<input type="checkbox"/> Tx Total
<input type="checkbox"/> Rx Total
<input type="checkbox"/> SNR
<input type="checkbox"/> Transmit CCQ

3. In the pop-up window, specify a name for the template and select the information options which will be displayed in the graph. For example, we specify the template name as Graph-1, and select CPU Load, Client Number and SNR to be displayed. Click **OK**.

Add Set

Name:

<input type="checkbox"/>	Attribute
<input type="checkbox"/>	Tx Rate
<input type="checkbox"/>	Rx Rate
<input checked="" type="checkbox"/>	CPU Load
<input type="checkbox"/>	Memory Usage
<input checked="" type="checkbox"/>	Client Number
<input type="checkbox"/>	Tx Total
<input type="checkbox"/>	Rx Total
<input checked="" type="checkbox"/>	SNR
<input type="checkbox"/>	Transmit CCQ

4. The template is created. You can add more templates or delete the unused templates on this page. Also, you can edit the displayed information options in the right-hand column by checking or unchecking the boxes.

Graph ✕

Option Graph

Attribute Set

Graph-1

<input type="checkbox"/>	Attribute
<input type="checkbox"/>	Tx Rate
<input type="checkbox"/>	Rx Rate
<input checked="" type="checkbox"/>	CPU Load
<input type="checkbox"/>	Memory Usage
<input checked="" type="checkbox"/>	Client Number
<input type="checkbox"/>	Tx Total
<input type="checkbox"/>	Rx Total
<input checked="" type="checkbox"/>	SNR
<input type="checkbox"/>	Transmit CCQ

5. Click the **Graph** button to enter the following page. Select a template and click  to start the dynamic real-time monitoring. The horizontal axis displays the time, and the vertical axis displays the values. You can click  to stop the dynamic displaying, and move your mouse to any of the curves to view the data information at a specific time. For example, at 16:05:57 of the day, the SNR is -1 dB, the CPU load is 2% and no client is connected to the device for the time being.

2.1.3 Manage the Devices

With Pharos Control, you can centrally manage your Pharos devices. The following sections introduce how to configure, upgrade, reboot and ping the devices, and how to open their management web pages.

Note:

The following operations can be executed only on the devices in Managed status: configuring, upgrading, rebooting and opening the web page.

Configure the Devices

Follow the steps below to configure the devices.

1. Select your desired device and click . If you want to upgrade devices in batch, make sure that these devices can be upgraded with the same firmware file.

The screenshot shows the TP-Link PHAROS CONTROL web interface. At the top, there is a navigation bar with the TP-Link logo and 'PHAROS CONTROL' text. On the right, there are user controls for 'admin' and 'Log out'. Below the navigation bar, there are tabs for 'Device', 'Firmware', 'Task', 'Trigger', 'Account', and 'Log'. The 'Device' tab is active. On the left side, there is a sidebar with a tree view showing device groups: 'All Devices(2)', 'Auto Grouping(2)', 'Managed(2)', 'Unmanaged(0)', and 'Manual Group(1)'. The main area displays a table of devices. The table has columns for 'Device Name', 'Status', 'IP Address', 'Version', and 'Mode'. Two devices are listed, both named 'CPE210' and in 'Managed' status. The second device, with IP address '192.168.0.22', is selected. Above the table, there are several icons for device management, and the 'Edit' icon (a pencil) is highlighted with a red box. A search bar and 'List'/'Map' buttons are also visible.

Device Name	Status	IP Address	Version	Mode
CPE210	Managed	192.168.0.21	2.0.0 Build 20161115 Rel. 38185	Access Point
CPE210	Managed	192.168.0.22	2.0.0 Build 20161115 Rel. 38185	Access Point

2. In the pop-up window, configure the basic parameters of the device and click OK.

Edit Device

Device Name:

Region:

Mode:

Channel Width:

Max Tx Rate:

channel/frequency:

Transmission Power: (0 - 27)dBm

MAXtream: Enable

Distance Settings: (0 - 200)km

Auto

AP Isolation: Enable

Device Name Displays the name of the device.

Region Displays the region of the device.

Mode	<p>Select the IEEE 802.11 mode the radio uses. The available options vary with the product models.</p> <p>With a frequency band of 2.4GHz, CPE210/CPE220/WBS210 supports five wireless modes: 802.11b, 802.11g, 802.11n, 802.11b/g and 802.11b/g/n. You are recommended to set the 11b/g/n mixed mode, and all of 802.11b, 802.11g and 802.11n wireless stations can connect to the device.</p> <p>CPE510/CPE520/WBS510 has a frequency band of 5GHz, supporting 802.11a, 802.11n and 802.11a/n modes. We suggest to set in 11a/n mode, allowing both 802.11a and 802.11n wireless stations to access the device.</p>
Channel Width	<p>Select the channel width of the device. Options include 5MHz, 10MHz, 20MHz and 20/40MHz. According to IEEE 802.11n standard, using a channel width of 40MHz can increase wireless throughput. However, you may choose lower bandwidth due to the following reasons:</p> <p>Increase the available number of channels within the limited total bandwidth.</p> <p>To avoid interference from overlapping channels occupied by other devices in the environment.</p> <p>Lower bandwidth can concentrate higher transmit power, increasing stability of wireless links over long distances.</p> <p>Subject to the channel width of root AP in Client/ Bridge/ Repeater/ Client Router operation modes.</p>
Max Tx Rate	<p>Select the maximum data transmission rate.</p>
channel/frequency	<p>Select the channel used by the device to improve wireless performance. This setting is only available in the modes of Access Point and AP Router. We recommend you use the Spectrum Analysis tool to select a proper channel.</p>
Transmission Power	<p>Specify the transmit power value. The valid values vary with the product models and regions.</p>
MAXtream	<p>Enable or disable MAXtream. This feature is only available in the modes of Access Point and AP Router. MAXtream is a proprietary technology of TP-Link for Wi-Fi system. It is based on TDMA (Time Division Multiple Access) so that data streams are transmitted in strict order. MAXtream aims to maximize throughput and minimize latency especially in a multi-STAs circumstance. "Hidden nodes" problem can also be eliminated with MAXtream enabled. We recommend you turn on MAXtream in a large scale wireless deployment to achieve better performance.</p> <p>Note: MAXtream Technology is only compatible with Pharos series products. You cannot connect other Wi-Fi devices to an AP with MAXtream enabled.</p>

Distance Settings

Specify the distance between AP and Station. If this device serves as a client, the value is the distance between this device and the root AP. If this device serves as an AP, the value is the distance between the farthest client and this AP.

You can manually enter the value or enable the Auto option.

Manual: Enter the distance manually in the input box. The value is limited to 0-200km, and we recommend you set the value to 110% of the real distance.

Auto: Check the Auto option, then the system will dynamically detect the distance. This function is available only when the distance is less than xx kilometers. The value xx varies according to the channel width you set. CPE210 does not support this option.

AP Isolation

Enable or disable AP Isolation. AP Isolation is used to isolate all wireless stations connected to this device so that they cannot communicate with each other. This function will be disabled if WDS/Bridge is enabled.

Upgrade the Devices

Follow the steps below to upgrade the devices.

1. Import the firmware files. For details, refer to [Manage Firmware Files](#).
2. Select your desired device and click . If you want to upgrade devices in batch, make sure that these devices can be upgraded with the same firmware file.

The screenshot shows the TP-Link PHAROS CONTROL web interface. The 'Device' tab is selected, and a table of devices is displayed. The table has columns for Device Name, Status, IP Address, Version, and Mode. The device 'CPE510' is selected, and the 'Upgrade' icon in the toolbar is highlighted with a red box.

Device Name	Status	IP Address	Version	Mode
CPE210	Managed	192.168.0.21	2.0.0 Build 20161117 Rel. 38185	Access Point
<input checked="" type="checkbox"/> CPE510	Managed	192.168.0.220	1.3.3 Build 20151215 Rel. 5855	Access Point

3. In the pop-up window, select the appropriate firmware file from the drop-down list, and click **OK**.

Upgrade Confirmation

Are you sure you want to upgrade the device(s) below?
Note: Only managed devices with adaptive firmware can be upgraded.

<input checked="" type="checkbox"/>	Device Name	IP Address	Firmware
<input checked="" type="checkbox"/>	CPE510	192.168.0.220	pharos-up-ver2-0-0-P1[20161025-re ▼]

Cancel OK

4. Then the device status will change to Upgrading. Wait for a while without any operation, and the device will be upgraded automatically.

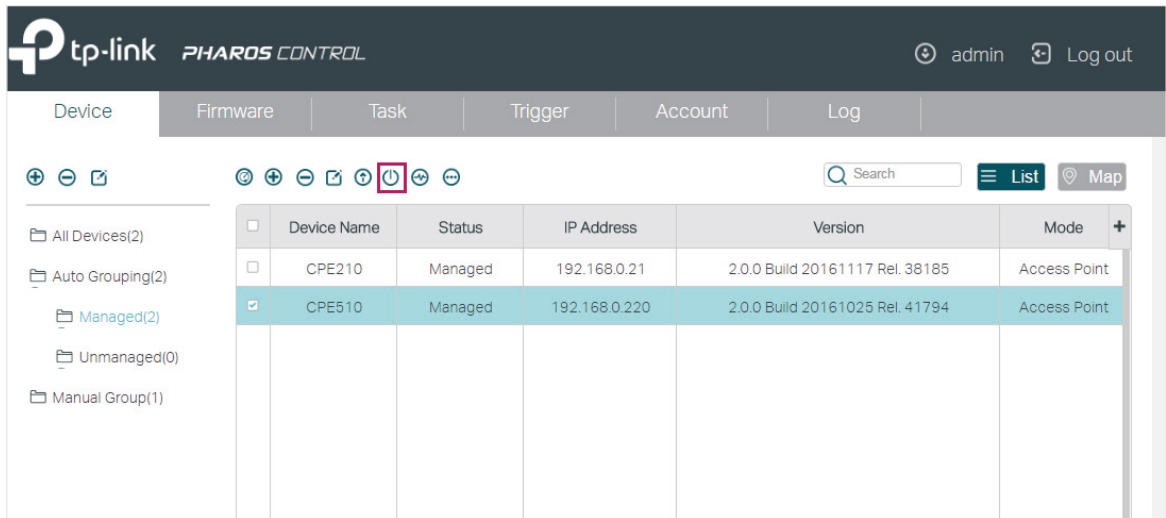

The screenshot shows the TP-Link PHAROS CONTROL interface. The top navigation bar includes the TP-Link logo, 'PHAROS CONTROL', and user information 'admin' and 'Log out'. Below the navigation bar are tabs for 'Device', 'Firmware', 'Task', 'Trigger', 'Account', and 'Log'. The 'Device' tab is active, showing a sidebar with device groups: 'All Devices(2)', 'Auto Grouping(2)', 'Managed(1)', 'Unmanaged(0)', and 'Manual Grouping(0)'. The main content area displays a table of devices. The table has columns for 'Device Name', 'Status', 'IP Address', 'Version', and 'Mode'. The device 'CPE510' is highlighted in blue, and its 'Status' is 'Upgrading', which is circled in red. The 'Version' for CPE510 is '1.3.3 Build 20151215 Rel. 5855'. The device 'CPE210' has a status of 'Managed' and a version of '2.0.0 Build 20161117 Rel. 38185'.

<input type="checkbox"/>	Device Name	Status	IP Address	Version	Mode	+
<input type="checkbox"/>	CPE210	Managed	192.168.0.21	2.0.0 Build 20161117 Rel. 38185	Access Point	
<input checked="" type="checkbox"/>	CPE510	Upgrading	192.168.0.220	1.3.3 Build 20151215 Rel. 5855	Access Point	

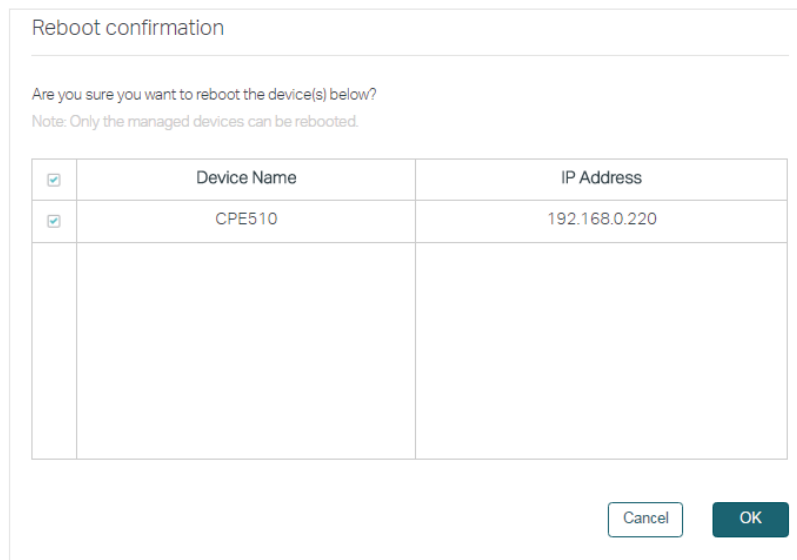

Reboot the Devices

Follow the steps below to reboot the devices:

1. Select one or more devices and click .

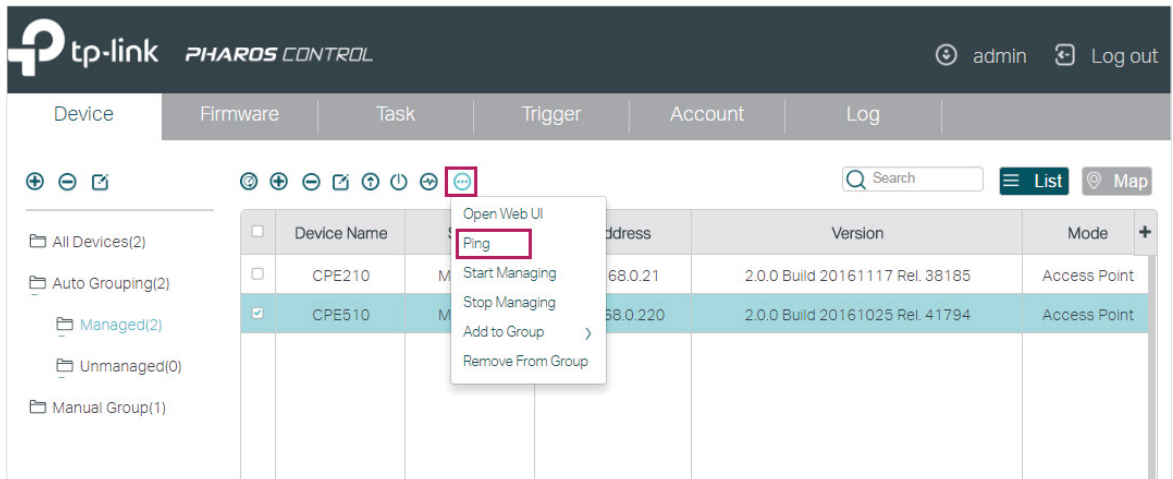

2. In the pop-up window, verify the device to be rebooted and click **OK**. Wait for a moment and the device will reboot automatically.

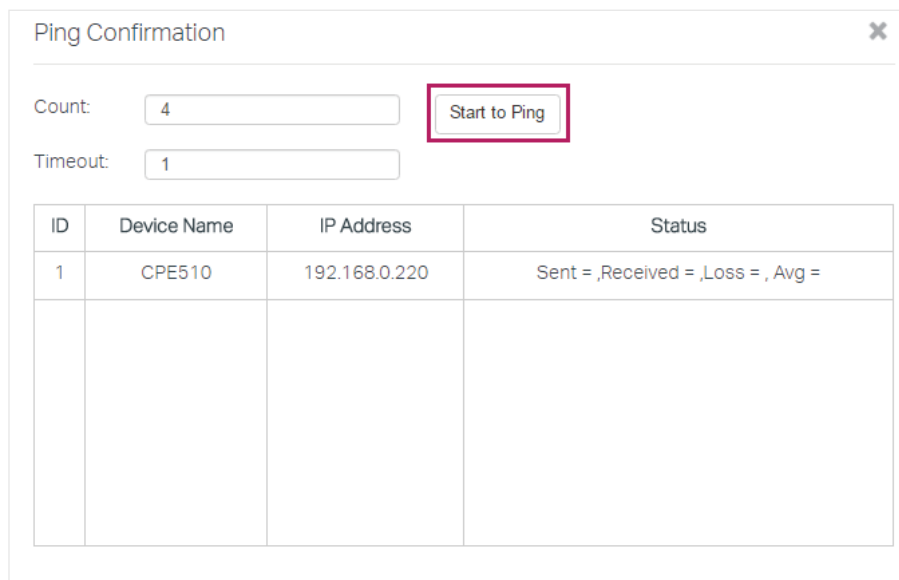

Ping the Devices

If you want to test the connectivity between Pharos Control and the devices, you can use the Ping feature. Follow the steps below to ping the devices.

1. Select your desired device, click  and select **Ping** in the drop-down menu.

2. In the pop-up window, set the number of ping packets to be sent and the timeout value. Timeout value determines how long Pharos Control will wait for the response from the device before the ping is regarded as failed. Click **Start to Ping**.

3. View the ping result in the Status column. As the following figure shows, Pharos Control sent 4 ping packets to the device and a response was received from the device every time, which indicates that the connection between Pharos Control and the device is normal.

Ping Confirmation

Count:

Timeout:

ID	Device Name	IP Address	Status
1	CPE510	192.168.0.220	Sent = 4, Received = 4, Loss = 0.0%, Avg = 1.0ms

Open the Web UI of the Device

You can open the web UI of each device under management. Select your desired device, click  and select **Open Web UI** in the drop-down menu. And then the web UI of the device will then open.

tp-link PHAROS CONTROL admin Log out

Device Firmware Task Trigger Account Log

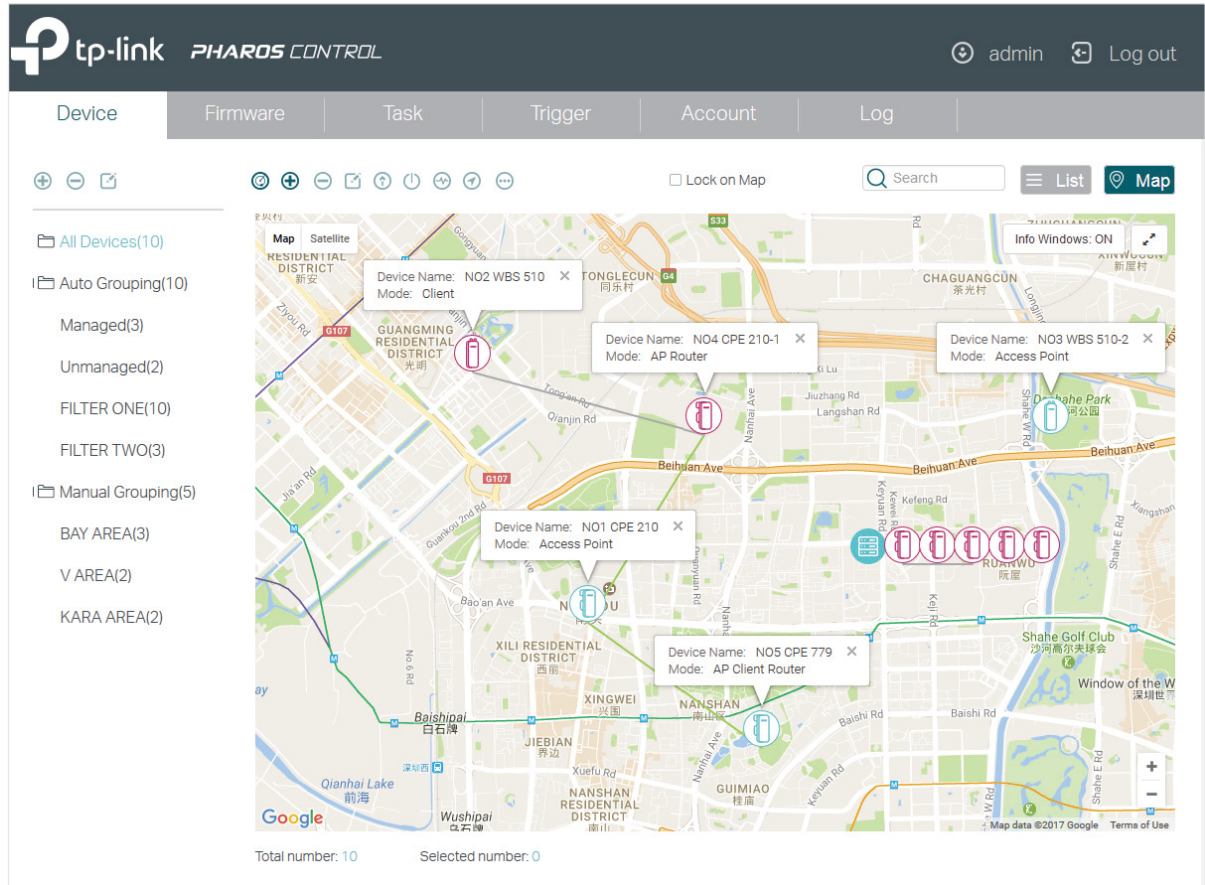

Search List Map

Device Name	IP Address	Version	Mode
CPE210	192.168.0.21	2.0.0 Build 20161117 Rel. 38185	Access Point
CPE510	192.168.0.220	2.0.0 Build 20161025 Rel. 41794	Access Point

- Open Web UI
- Ping
- Start Managing
- Stop Managing
- Add to Group
- Remove From Group

2.1.4 Monitor and Manage the Devices on Google Map

With this feature, you can drag your devices to their actual locations on the Google map, and visually monitor and manage these devices. Go to the **Device** page and click  **Map**. Then the map page will appear.

All devices are on the map. You can drag these devices to the appropriate locations according to their actual locations. Also, you can select one or more devices on the map, and do the operations introduced in the above sections, such as group the devices, view the graphic data information of the devices, and upgrade, ping, and reboot the devices.

The following table shows all icons and sub-functions on the map.

	It represents Pharos Control.
	It represents the device that is not being managed.
	It represents the device that is being managed.
Green Line Between Two Devices	It indicates the connection between the two devices is normal.

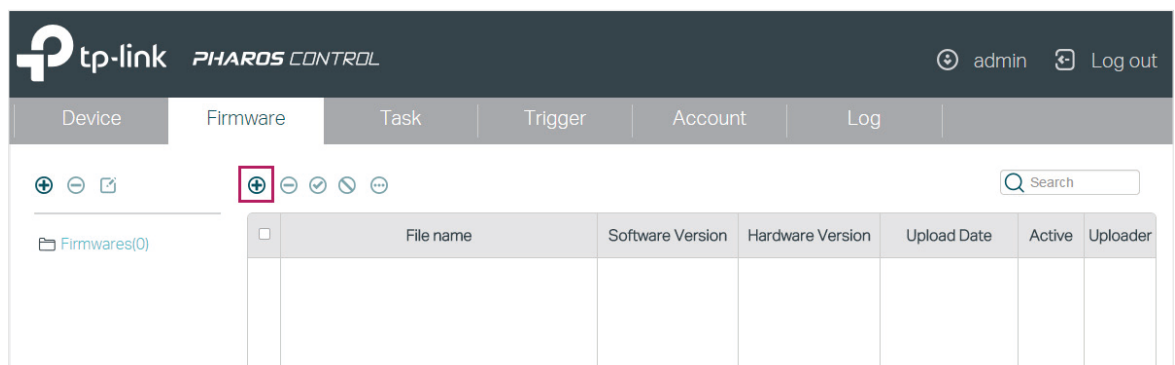

Gray Line Between Two Devices	It indicates the connection between the two devices is failed.
	To view the terrain on the map, click Map and check Terrain to enable the terrain display.
	Google provides satellite map, and you can click Satellite to change the current map to a satellite map.
	Click this button to set whether the information tag will be displayed at the top of the device icon. The tag displays the name and mode of the device.
	Click this button to view the map in full screen.
	Click this button to zoom in and out the map.
<input type="checkbox"/> Lock on Map	Check this option to lock the devices on the map, which means that the devices cannot be moved with this option enabled.

2.2 Manage Firmware Files

Firmware is released to upgrade the devices. To centrally and conveniently manage firmware, you can download firmware files from our website and import them to Pharos Control.

Follow the steps below to manage firmware files in Pharos Control:

1. Go to the **Firmware** page, and click .

- The following window will pop up. Click **Browse**, choose a firmware file from your local host, and click **OK**.

Add Firmware

File Path: **Browse**

Cancel **OK**

- In the same way, import all the firmware files to Pharos Control.

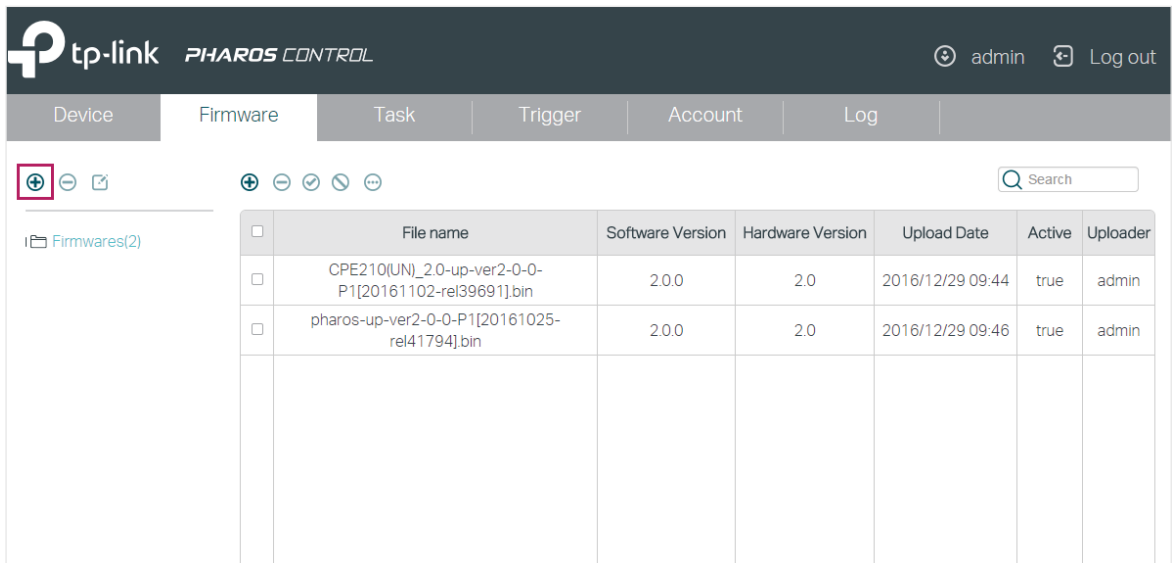

The screenshot shows the TP-Link PHAROS CONTROL interface. The 'Firmware' tab is selected, displaying a table of uploaded firmware files. The table has columns for File name, Software Version, Hardware Version, Upload Date, Active, and Uploader. Two files are listed, both with Software Version 2.0 and Hardware Version 2.0, uploaded on 2016/12/29 09:44 and 09:46 respectively. The 'Active' status is 'true' for both, and the 'Uploader' is 'admin'.

<input type="checkbox"/>	File name	Software Version	Hardware Version	Upload Date	Active	Uploader
<input type="checkbox"/>	CPE210(UN)_2.0-up-ver2-0-0-P1[20161102-rel39691].bin	2.0.0	2.0	2016/12/29 09:44	true	admin
<input type="checkbox"/>	pharos-up-ver2-0-0-P1[20161025-rel41794].bin	2.0.0	2.0	2016/12/29 09:46	true	admin

You can view the firmware information in the table.

File Name	Displays the name of the firmware file.
Software Version	Displays the software version of the firmware.
Hardware Version	Displays the hardware version of the firmware.
Upload Date	Displays the date and time of uploading the firmware.
Status	<p>Displays the status of the firmware entry. There are two kinds of statuses:</p> <p>Active: The firmware file can be used to upgrade the devices.</p> <p>Inactive: The firmware file is forbidden to upgrade the devices.</p> <p>You can select one or more firmware entries and click to deactivate the firmware or to activate the firmware.</p>
Uploader	Displays the username of whom uploaded the firmware.

- By default, all the firmware files are in the default group named **Firmwares**. If needed, you can create more groups to classify the firmware files. To add a new group, click  in the left column.

- The following window will pop up. Specify a name for the group and click **OK**.

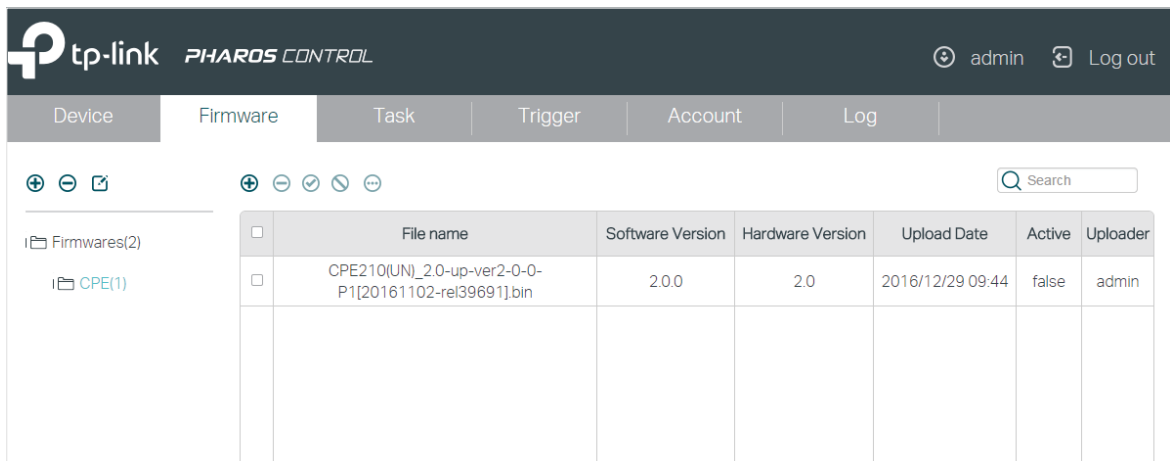

Add Group

Name:

- Select one or more firmware entries, click , move your mouse pointer to **Add to group**, and select the new group.

- Click the group name in the left column, and you can view the group member we just added to this group.

If you want to remove a firmware entry from a group, you can select the firmware, click  and click **Remove from the group**. Also, you can delete or edit the group as the following table shows.

Click this button to delete the current group

Click this button to edit the current group on the following window. You can select the firmware you want to keep in this group and then click **OK**. The deselected firmware will be removed from the group.

Edit Group

Name:

<input checked="" type="checkbox"/>	File name	Machine Type	Version
<input checked="" type="checkbox"/>	CPE210(UN)_2.0-up-ver2-0-0-P1[20161102-rel39691].bin	CPE210(TP-LINK UN N300-2 00000000)	2.0.0

2.3 Configure Scheduled Tasks

With this feature, you can set scheduled tasks for the devices and Pharos Control. For example, you can configure the managed devices to reboot every two weeks, or configure Pharos Control to discover the devices in the LAN at 8:00 am every day, which facilitates you manage your network.

Follow the steps below to configure scheduled rules.

1. Go to the Task page. Click .

The screenshot shows the TP-Link PHAROS CONTROL interface. The top navigation bar includes 'Device', 'Firmware', 'Task', 'Trigger', 'Account', and 'Log'. The 'Task' tab is active. Below the navigation bar, there is a toolbar with a plus icon (highlighted with a red box), a search icon, and several status icons. A search bar is located on the right. On the left, there is a sidebar with a folder icon and the text 'Tasks(6)', and sub-items: 'Scheduled(0)', 'Running(0)', and 'Completed(6)'. The main area contains a table with the following columns: Name, Action, Time Created, Start Time, Finish Time, Scheduled By, and Active.

2. Then the following window will pop up.

The 'Add Schedule' dialog box is shown. It has two main sections: 'Scheduled' and 'Task'.
In the 'Scheduled' section:
- 'Name' is 'Task1'.
- 'Scheduled' is selected with a radio button.
- 'Once' is selected with a radio button.
- 'Date' is '2016-12-30' with a calendar icon, and time is '17 : 01'.
- 'Cycle' is not selected.
- 'From' is '2016-12-30' with a calendar icon, and time is '17 : 01'.
- 'To' is '2016-12-30' with a calendar icon, and time is '17 : 01'.
- 'Period' is 'Month' with a dropdown arrow, 'Date' is '1' with a dropdown arrow, and 'Time' is '00 : 00' with dropdown arrows.
In the 'Task' section:
- 'Task' is 'Discover' with a dropdown arrow.
- 'Device Group' is 'All devices' with a dropdown arrow.
- A table with two columns: 'Device Name' and 'IP Address'.
- The table has one row: 'New Device' and '192.168.0.220'.
At the bottom right, there are 'Cancel' and 'OK' buttons.

1) Specify a name for the task.

2) Configure the Scheduled parameters:

Scheduled

Once

Date: :

Cycle

From: :

To: :

Period: Date: Time: :

The following table introduces the configuration options.

Once

Enable this option and specify a point in time. The task will be performed at the specified time.

For example, the following configuration indicates that the task will be performed at 8pm on Feb 22nd, 2017. And the task will be performed only once.

Once

Date: :

Cycle

Enable this option and specify a time range and the task interval. During the time range, the task will be performed at every interval.

For example, the following configuration indicates that from Feb 20th, 2017 to Apr 20th, 2017, the task will be performed at 8 am each Sunday morning.

Cycle

From: :

To: :

Period: Date: Time: :

3) Select a task type and configure the corresponding options.

Task

Task: Device Group:

<input type="checkbox"/>	Device Name	IP Address
<input type="checkbox"/>	New Device	192.168.0.220
<input type="checkbox"/>		

The following table introduces the task types:

Discover	Pharos Control will discover the devices in the network at the scheduled time.
Reboot	Pharos Control will reboot the selected devices at the scheduled time.
Firmware Upgrade	Pharos Control will upgrade the selected devices using the specified firmware at the scheduled time.
Manage	Pharos Control will check whether the selected devices are currently being managed at the scheduled time. If not, Pharos Control will try to change the status of the devices from Unmanaged to Managed.

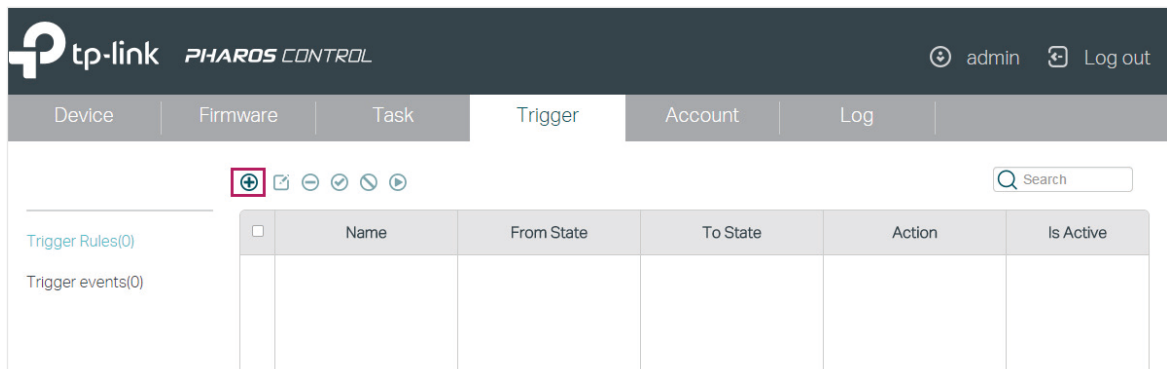

3. Click **OK**.

2.4 Configure Trigger Rules

This feature is used to inform you of a device status change via email and help you manage the devices automatically. For example, if a device with Managed status has an issue and changes to Unmanaged status, Pharos Control will try to manage this device again, and at the same time, send an email to the specific mailbox to inform you of this event.

Follow the steps below to configure the Trigger feature:

1. Go to the **Trigger** page and click .

2. The following window will pop up. Configure the required options.

Add Trigger
▲

Name:

Device Group:

Condition: From: To:

Type:

Action Settings

To:

Subject:

Email Settings ▼

Name	Specify a name for this trigger rule.
Device Group	Select a device group on which the rule will take effect.
Condition	Configure the trigger conditions. For example, if we choose From as Managed and To as Unmanaged, Pharos Control will send an email to the specific mailbox when the status of a device in the selected group changes from Managed to Unmanaged.
Type	<p>If the condition From is selected as Managed, there are two types: Email Notification and Manage Device. If the condition From is selected as Unmanaged/Error, there is only one type: Email Notification.</p> <p>Email Notification: Pharos Control will send an email to the specific mailbox.</p> <p>Manage Device: Pharos Control will try to change the status of the device from Unmanaged/Error to Managed.</p>
Action Settings	<p>Set the email information.</p> <p>To: Set the recipient's mailbox address.</p> <p>Subject: Set a subject for the email.</p>

3. Click the **Email Settings** tag to expand the following section. Fill in the mail server information according to your own details.

Email Settings ▲

Default Gmail (OAuth2)

Email Server Address:

Email Server Port:

SSL: Enable

Email Account:

Email Password:

Note: If you use Gmail here, make sure the "Allow less secure apps" setting is ON in your Gmail account settings.

- If you do not use a Gmail server to send the trigger email, select **Default** option, configure the following parameters, and click **OK**.

Email Server Address	Enter the IP address of the email server.
Email Server Port	Enter the port of the email server.
SSL	Enable or disable SSL encryption. If your email server supports SSL encryption, we recommend that you enable this option to enhance the email security.
Email Account	Enter the email account.
Email Password	Enter the email password.

- If you use a Gmail server to send the trigger email, there are two configuration methods.

Method 1:

- 1) Complete the configurations as shown above.
- 2) Turn on "Allow less secure apps" option in your Gmail account settings. You can click the note with blue color on the page to quickly access the Gmail website.

Method 2:

1) Select **Gmail (OAuth2)** option.

The image shows a dialog box titled "Email Settings". At the top, there are two radio button options: "Default" and "Gmail (OAuth2)". The "Gmail (OAuth2)" option is selected. Below the options is a blue button labeled "Get Code". Underneath, there is a label "Code:" followed by an empty text input field. To the right of the input field is a blue button labeled "Validate". At the bottom right of the dialog, there are two buttons: "Cancel" and "OK".

2) Click **Get Code**, and you will be directed to the Gmail website.

3) Log in to your Gmail account and copy the received code to the **Code** area on the above page.

4) Click **Validate** to check whether the code is valid. If an error is displayed, check whether the code is correctly copied and try again. If a green tick is displayed, just click **OK** to save your settings, and Pharos Control will use your Gmail account to send the trigger emails.

4. To verify whether the email settings are correctly configured, select the rule you just created, and click  to do a test. Pharos Control will send an email to the recipient's mailbox via the email server. You can check whether an email is received in the recipient's mailbox. If does, the Trigger feature works normally.

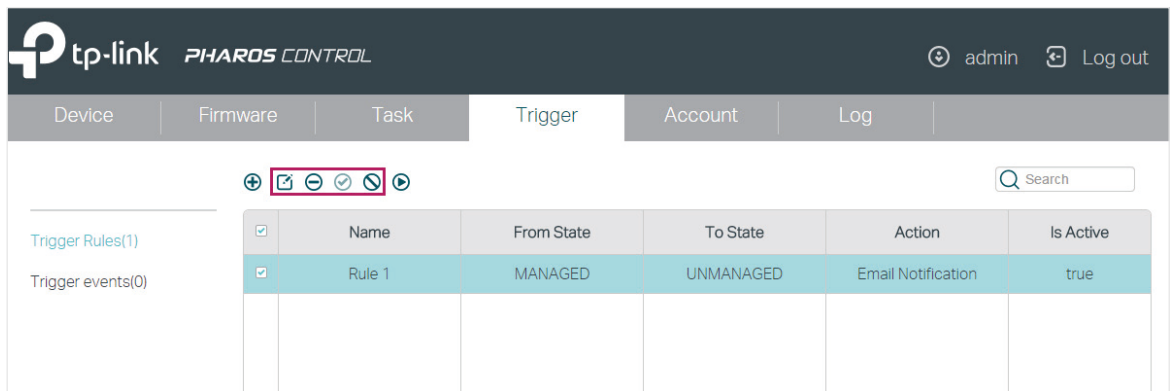

The image shows the "Trigger" tab in the Pharos Control interface. The top navigation bar includes the TP-Link logo, "PHAROS CONTROL", and user information "admin" with a "Log out" link. Below the navigation bar, there are tabs for "Device", "Firmware", "Task", "Trigger", "Account", and "Log". The "Trigger" tab is active. On the left side, there are sections for "Trigger Rules(1)" and "Trigger events(0)". The main area contains a table with the following data:

<input checked="" type="checkbox"/>	Name	From State	To State	Action	Is Active
<input checked="" type="checkbox"/>	Rule 1	MANAGED	UNMANAGED	Email Notification	true

5. After all the configurations above are completed, you can use this feature without any other operations. If needed, you can also manage the trigger rules and view the trigger events on the this page.

- Manage Trigger Rules

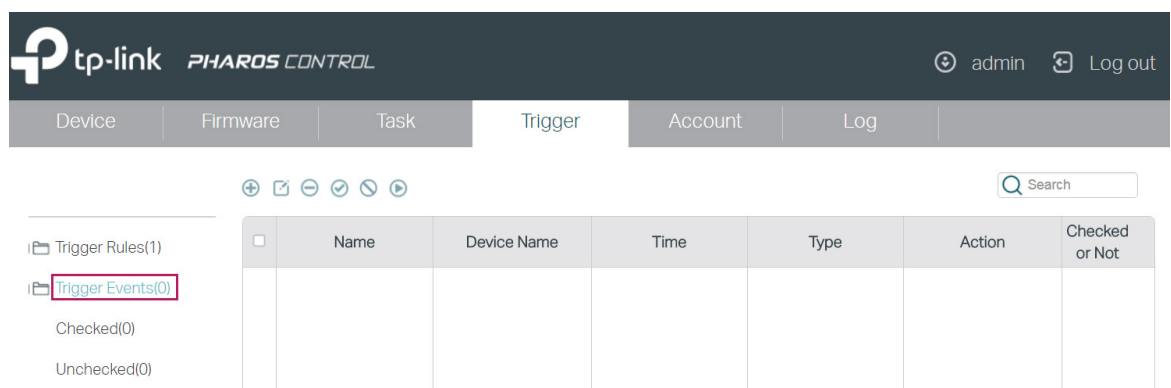

Select one or more trigger rules and do the corresponding operations for this rule.

-  Click this button to edit the rule.
-  Click this button to delete the rule.
-  Click this button to activate the rule, and the status of this rule will change from Inactive to Active.
-  Click this button to deactivate the rule, and the status of this rule will change from Active to Inactive.
-  Click this button to make Pharos Control send a test email to the recipient's mailbox.

- View Trigger Events

Once an event matching any of the rules occurs, an email will be sent and a corresponding trigger event will be recorded in the event list. Click **Trigger Events** in the left column to view the trigger events.

Name	Displays the name of the trigger rule.
Device Name	Displays the name of the device.
Time	Displays the time when the event happened.
Type	Displays the type of event.
Action	Displays the trigger rule type: Manage Device or Email Notification.
Checked or Not	Displays whether the event has been checked or not.

3 Manage Accounts and Logs

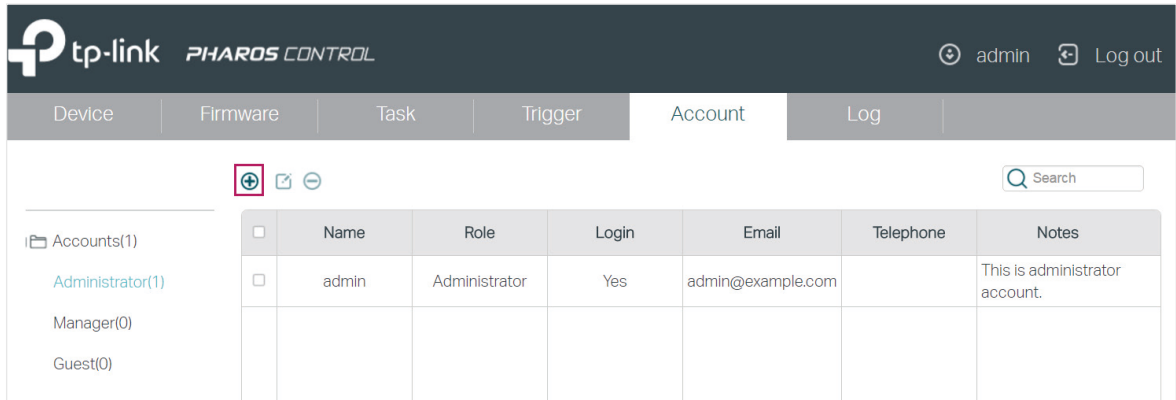

This chapter introduces how to manage Pharos Control accounts and logs:

- *Manage Accounts*
- *Manage Logs*

3.1 Manage Accounts

Pharos Control supports three account types: Administrator, Manager and Guest. The account created in the installation process is an Administrator account and cannot be deleted. If your current account type is Administrator, you can follow the steps below to create another account.

1. Go to the **Account** page and click .

2. Then the following window will pop up. Configure the required parameters and click **OK**.

Add

Role: Administrator Manager Guest

- View status of all devices.
- Change configurations of all devices.
- Change configurations of the server.

User Name:

Password:

Confirm Password:

Email:

Telephone:

Notes:

Role	<p>Select the type of the account to be created. The following options are provided: Administrator, Manager and Guest.</p> <p>Administrator can view and configure the devices, and can change the configurations of Pharos Control.</p> <p>Manager can view and configure the devices, but cannot change the configurations of Pharos Control.</p> <p>Guest can only view the devices.</p>
User Name	Specify a username.
Password	Specify a password.
Confirm Password	Enter the password again for confirmation.
Email	Specify the email for the user.
Telephone	(Optional) Specify the telephone number of the user.
Note	(Optional) Specify a note.

Also, you can select an account and click  to edit it.

3.2 Manage Logs

The logs of Pharos Control can effectively record, classify and manage the system information of the managed devices, providing powerful support for you to monitor network operations and diagnose malfunctions.

Go to the **Log** page, and you can view all the logs. Also, you can click the tags in the left column to view the classified logs, including normal logs, events and errors.

	Time	Message	Type	Device Name	MAC Address
<input type="checkbox"/>	2016/12/29 14:58	Trigger has been added successfully, whose name is Rule 1	LOG		
<input type="checkbox"/>	2016/12/29 14:58	Server Trigger Manager updated. Add new rule, which name is Rule 1	LOG		
<input type="checkbox"/>	2016/12/29 14:58	Mail server setting has been changed. mail server address is 127.0.0.1	LOG

Pharos Control provides two operations for the logs: exporting the logs to your local host and deleting the logs.

- Export the Logs

You can export the logs which are recorded in a specific period of time. But exporting a single log is not supported.

Follow the steps below to export the logs:

1. Click  and the following window will pop up. Specify a time range and click **OK**.

Export

From:  09 : 02

To:  16 : 21

2. The logs will be exported in the excel file. Select a file path to save the logs in your local host.

1	Time	Message	Type	Device Name	MAC Address

- Delete the Logs

There are two ways to delete the logs: delete the selected logs and delete the logs recorded in a period of time. Also, you can delete all logs in the table with one click.

Follow the steps below to delete the selected logs:

1. Select one or more logs you want to delete and click .

The screenshot shows the TP-Link PHAROS CONTROL web interface. At the top, there is a navigation bar with the TP-Link logo, the text "PHAROS CONTROL", and user information "admin" and "Log out". Below the navigation bar is a menu with tabs for "Device", "Firmware", "Task", "Trigger", "Account", and "Log". The "Log" tab is active. On the left side, there is a sidebar with a search icon and a search box. Below the sidebar, there is a list of log categories: "All Logs(62)", "Log(50)", "Event(9)", and "Error(3)". The main content area displays a table of logs with columns: "Time", "Message", "Type", "Device Name", and "MAC Address". Two rows in the table are selected, indicated by blue highlighting and checked checkboxes in the first column. The selected rows are:

	Time	Message	Type	Device Name	MAC Address
<input checked="" type="checkbox"/>	2016/12/29 14:58	Server Trigger Manager updated. Add new rule, which name is Rule 1	LOG		
<input checked="" type="checkbox"/>	2016/12/29 14:58	Mail server setting has been changed. mail server address is 127.0.0.1	LOG		

2. The following window will pop up. Select **Delete the selected logs** and click **OK**.

Delete
